VANSH JAIN

ABOUT ME

Unreal Engine developer with hands-on experience in C++ gameplay programming, multiplayer systems, and gameplay feature development. Developed projects involving AI systems, UI implementation, and multiplayer session management in Unreal Engine 5. Passionate about gameplay programming, solving technical challenges, and creating interactive player experiences, while continuously expanding knowledge in networking, game systems, and game development workflows.

EDUCATION

BTech in CSE with Specialization in Gaming Technology , CGPA: 8.4
Aug 2023 - Present
SRM University , Chennai

MPC , Percentage: 88
Jun 2021 - May 2023
New Era Jr College , Hyderabad

ICSE (Class 10) , Percentage: 90
Jun 2021
St Joseph Public School , Hyderabad

PROJECTS

Dungeon Escape Game | Unreal Engine 5, C++ Mar 2026 - Mar 2026
<https://github.com/vanshjain609/dungeonescape>

- Developed a 3D dungeon escape game using Unreal Engine 5 and C++, focusing on core gameplay systems and player experience.
- Implemented player movement, camera controls, and interaction systems for seamless navigation and object handling.
- Designed and integrated puzzle-based mechanics requiring logical problem-solving to progress through levels.
- Developed enemy AI using Behaviour Trees, enabling dynamic behaviors such as patrolling, chasing, and player reaction systems.
- Created UI systems using UMG, including health indicators, game menus, and in-game feedback elements.
- Implemented collision handling, physics interactions, and trigger-based events to enhance gameplay realism.
- Designed and structured level layouts with interactive environmental elements to support gameplay flow.
- Debugged gameplay systems and performed performance optimization to ensure smooth and responsive gameplay.

Human Shooter Game | Unreal Engine 5, C++ Jan 2026 - Feb 2026
<https://github.com/vanshjain609/shooterdon>

- Developed a **3D shooter game** using **Unreal Engine 5** and **C++**, focusing on **responsive combat systems** and **player experience**.
- Implemented **player movement**, **camera control**, and **shooting mechanics** including **aiming**, **firing logic**, and **accurate hit detection**.
- Designed and programmed **enemy AI** using **Behavior Trees**, enabling actions such as **patrolling**, **player detection**, **chasing**, and **attacking**.
- Built **weapon systems** including **damage calculation**, **shooting effects**, and **combat feedback mechanisms**.
- Created **UI systems** using **UMG**, including **health bar**, **ammo tracking**, and **real-time gameplay feedback**.
- Implemented **collision handling** and **physics-based interactions** to enhance **realism** and **shooting accuracy**.
- Designed and structured **combat-focused levels** with **interactive elements** to support **engaging gameplay scenarios**.
- Debugged **gameplay systems** and performed **performance optimization** to ensure **smooth** and **stable gameplay**.

Gun Survivors

Oct 2025 - Nov 2025

<https://github.com/vanshjain609/thiefchac>

- Built a **2D endless survival shooter** using **Unreal Engine 5**, **C++**, and **Blueprints**, featuring **sprite-based player**, **enemy**, and **weapon systems**.
- Engineered a **dynamic enemy spawning and difficulty scaling system** that progressively increases gameplay challenge based on score progression.
- Designed and implemented **core gameplay systems** including **enemy AI spawning logic**, **scoring mechanics**, **collision handling**, and **survival state management**.
- Developed an **adaptive endless gameplay loop** focused on increasing combat intensity, replayability, and player progression.
- Integrated **real-time score tracking** and **game-over logic** to manage combat outcomes and gameplay flow.
